

**Create  
stunning  
signs in less time  
with EasySIGN® software.**  
This full featured Designing,  
Plotting, Printing, Routing and  
Production software is used to create  
award winning signs all over the world.  
EasySIGN is the tool of choice for quickly  
generating professional and eye-catching  
signs, displays, exhibition stands, lettering  
and much more. Enhanced toolsets enable  
you to create your productions the way you  
want, manage complex worksheets and  
take advantage of improved pipeline-  
integration support for the mayor  
design software products like  
Adobe Photoshop™, Adobe  
Illustrator™ and  
CorelDraw™.

## Never have to wait again

The release of new features, drivers and improvements do not have to wait until the release of a new version of the software anymore. We did away with the versioning system and fully embraced Service Packs. EasySIGN now uses Service Packs to not only release bug fixes and small improvements but also to release new features, new drivers and major improvements. For you as an end-user this means your software will always be up-to-date with the latest features, drivers and improvements. A maintenance contract will ensure you a constant flow of new items and major improvements.

## The big changes lie under the hood

Fully compatible with Windows 7, a huge code overhaul to even further improve stability and speed. Also the PDF workflow is greatly improved.

## Some changes are not even in EasySIGN

To overcome cluttering of EasySIGN some of the new features are now separated from the core of EasySIGN and placed in easy to master Helpers.

## Stick it or not

EasySIGN is no longer only depended of a Hardware lock. You can choose to use a hardware lock or to bind the license to a specific computer. Each has its own advantages and the choice is up to you.

## What flavor do you want?

EasySIGN is now available in more than one flavor. You can choose either a Perpetual (lifetime) license or a Subscription (annual) license.

- Perpetual (lifetime) license comes with free 90 days EasySIGN maintenance and the option to buy EasySIGN maintenance when you need it, EasySIGN maintenance is an annual subscription that is automatically renewed.
- Subscription (annual) license is an annual subscription that is automatically renewed with free Maintenance for the same period as your subscription.

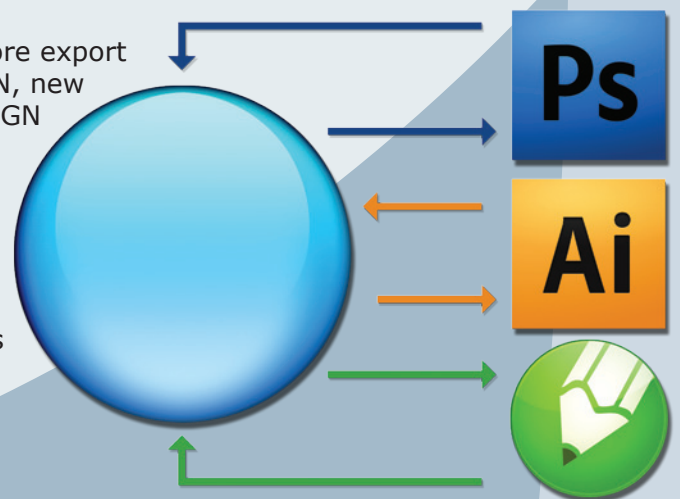

You can stop the annual renewal of a license at any-time in our Webshop using your account page.

## Compatibility

Compatibility is now a two way pipeline. You can as before export worksheets from the supported applications to EasySIGN, new is that you now can also export worksheets from EasySIGN to the supported applications. Also Compatibility with Coreldraw™ X5, Adobe Illustrator™ CS5 and Adobe Photoshop™ CS5 is added.

## Text merge

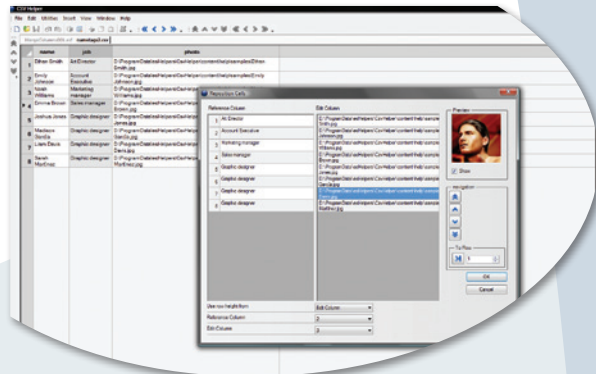

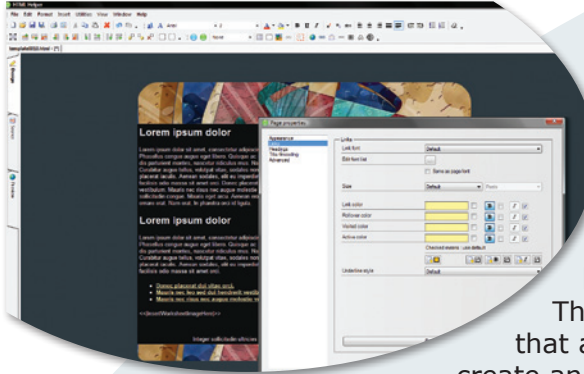

The worlds most easy and versatile text merge there is. Create automatically any number of design variations

with different text and/or images based on your design and a simple text file (.CSV). This text based .CSV file can either be supplied by your customer from e.g. their database or can be made from scratch with Excel or the new EasySIGN CSV Editor.

## EasySIGN CSV Editor

The new EasySIGN CSV Editor contains functionality especially built to match the needs for the Signmaking and Finishing industry. It can convert Access database files supplied by your customer, create specific auto numbering sequences, rearrange rows and columns, automatically add paths to image files, search and replace, merge columns and rows etc.

## Send your design for approval

You can now use Outlook™ 2003 and 2007 to send your design directly from EasySIGN to your customer. Not only that but you can use the new EasySIGN HTML Editor to easily construct an email that can be read in any email client.

## EasySIGN HTML Editor

The new EasySIGN HTML Editor is especially made to make sure that any email you design can be read in any email client. You can create an e-mail from scratch or use one of the available templates which you can use unedited or as base for your companies personalize email.

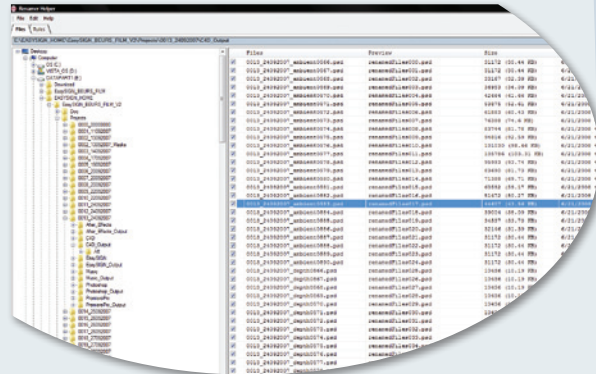

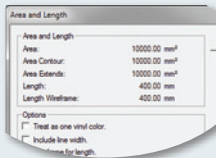

This helper application is easy to use and requires no knowledge of the HTML language.

## EasySIGN File Rename

A helper application for easy file renaming. This is especially useful for renaming files from e.g. a digital camera.

## Calculate line length and surfaces

Never have to guess again how much material will be used for a specific job.

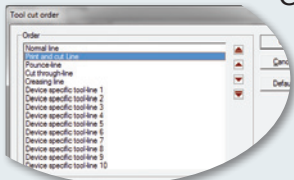

## Sign Blanc

Use any shape to define as place holder for your design surface. You can for example use a drawing that represents an outdoor sign and make your design within the boundaries of the Sign Blanc. The Sign Blanc will never be printed or cut.

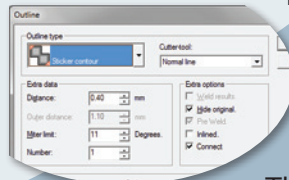

## Device specific tool lines

Create device specific tool lines and define the cutting order of the tools. You can even specify your own custom colors per line type.

## Connect

The Stickercontour has an extra option called 'Connect' which makes it possible to create a single peelable design no matter how far the elements of a design lie apart.

This feature could be described as an intelligent combination between a Rubberband and the old Stickercontour.

## Advanced import

It is now possible to import a PDF or AI-PDF (Illustrator version 9 and up are actually PDF files) as a bitmap while simultaneously separating Cut lines as vector. In the settings dialog you can choose a hairline color that should be imported as a Cut line, previously this would only work with AI files version 8 and lower. Now this will work for every PDF or AI-PDF file.

### **Magic Wand Outline**

Apply outlines to the bitmap data itself. Select a part of the bitmap with the Magic Wand tool and apply an outline directly to the Magic Wand.

### **Naming objects**

Every object can be given its own name which makes it a lot easier to find objects in a 'crowded' worksheet.

### **Inspiration**

Need a background or illustration for your poster, brochure or any other design? Just go to shop. easysign.com and find anything you need. Large format illustrations suitable for large format printing and offset printing. Direct downloadable Royalty Free Stock Images especially made for the Signmaking and Finishing industry. While there, also have a look at the other products available.

### **EasySIGN High Resolution Images**

EasySIGN High Resolution Images is a special collection of original illustrations specially made for the Signmaking industry and demanding designers. The illustrations available in the EasySIGN High Resolution Images collection are unique and are meant as building blocks for signs, offset printing, cover art, posters, exhibitions etc.

All the images have a resolution of 3580x2551 pixels which is an "A4 size" or "Letter" size with overlap on 300DPI for offset print. For close-viewing and large format printing this resolution is suitable for at least 126x90 cm (50x35 inch) and even a lot larger for roadside billboards.

### **EasySIGN Seamless Tile Fills**

EasySIGN Seamless Tile Fills are high resolution seamlessly tile-able bitmaps. The EasySIGN textures are meant for software applications that support tile fills (like EasySIGN). Because they are seamlessly tile-able you can tile them indefinitely to fill any size area you need. Use them in for example backgrounds or designs that need large areas filled with one structure. They are also very suitable for 3D applications to map them on 3D objects or even as website page backgrounds.

All the images have a resolution between 300x300 pixels and 900x900 pixels. For offset print this size means that a single tile is between 25x25mm and 75x75mm large. For large format printing this is between 105x105mm (4.13x4.13inch) and 317x317mm large (12.5x12.5inch).

### **EasySIGN Bitmap Fonts**

EasySIGN Bitmap Fonts are very high resolution bitmaps of characters with an alpha channel for transparency and a vector path for Print & Cut.

All the images have a resolution of 2000x2000 pixels. For offset print this size means you can use each character as large as 170x170mm (6.7x6.7inch). For large format printing you can use each character 700x700mm (27.6x27.6inch) for close viewing like for exhibitions and even a lot larger for roadside billboards.
